

Wholesale fax provisioning API

Wholesale customers can provision fax services on their own, non-aql, numbering using the following API.

The following HTTP POST requests can be sent to:

<http://gw.aql.com/reseller/wsfaxapi.php>

Errors are returned in the form: ERR:Message

'OK' is returned for successful operations

Required parameters for all operations:

- username - aql.com username
- password - aql.com password
- action - the action name

action:adduser

Parameter	Notes
faxnumber	The Fax Number in international form (e.g. 441133203040)
name	The "Friendly Name" to associate with the fax number
email	The email address to associate with the fax number
format	The file format to be used when emailing faxes [pdf tif]

Returns OK if successful, ERR: (followed by an error description) otherwise.

action:getuse

Parameter	Notes
faxnumber	The Fax Number in international form (e.g. 441133203040)

Returns item:value pairs separated by newlines, e.g.:

```
name:Joe User
email:user@example.com
format:pdf
```

action:changeuser

Parameter	Notes
faxnumber	The Fax Number in international form (e.g. 441133203040)
name	The "Friendly Name" to associate with the fax number
email	The email address to associate with the fax number
format	The file format to be used when emailing faxes [pdf tif]

Returns OK if successful, ERR: (followed by an error description) otherwise.
